

# KICK-START 38

*Farmers : Wake up your grass this spring with Kick-Start*

## Key Points:

- Is a granular blended urea based fertiliser
- Packaging in 375kg bags
- A very clean, dust free product.
- No fillers
- Free flowing, uniform spread

## Why use it?

- Early spring grass is the highest quality, most efficient feed on the farm. The cost of feeding spring grass is 7c/kg utilizable DM compared to feeding first cut silage at 15c/kg!
- Unlike other urea products, Kick-Start does not deplete the soil of P&K.

*“Each extra ton of grass eaten is worth €185/HA in extra profit” - Teagasc*

## Nutrient Composition

### Kick-Start 38

**Total Nitrogen**      **38% (Ureic 35.5% + Ammonical 2.5%)**

**Total Phosphorus**   **2.5%**

**Total Potassium**    **5%**

### When can I use Kick-Start?

The ideal time for applying Kick-Start is from January through to Mid April. As this is a urea based product it works best under damp, cool (less than 10 degrees) conditions. It is not recommended for newly reseeded or recently limed ground.
